

Site Investigations – Lead Service Lines

The City of Owosso received funding from the Michigan Department of Environmental Quality (MDEQ), for a Pilot Drinking Water-Community Water Supply Grant. The purpose of this grant is to fund the investigations of lead and galvanized steel water service pipes, plan for future removal of these pipes, and fund the physical removal of a limited number of service pipes.

The city is currently in the investigation stage of this program. In order to complete this task, the city needs consent from the property owner to expose the water service line between the sidewalk and house to confirm what material the service line is composed of. This is the “private water service pipe” location as shown on the sketch to the right.

Below is a list of potential sites the city plans to investigate. The city will be reaching out to at least one adjacent property owner to each listed below, in the event some property owners decide not to participate (see attached Map).

1300 Freeman
874 Nafus
523 Martin
1541 W. Main
310 Lafayette
319 N. Brooks
787 Center
1426 Stinson
1230 Chipman
